Hi,

I am generating the process $ppbar \rightarrow e+e-$ using EvtGenDirect and switching on PHOTOS (release Dec17p1, macros from /pandaroot/macro/run, $p=1.5$ GeV).

It seems that PHOTOS is not working properly here since the invariant mass of the $e+e-$ is always equal to the theoretical value 2.254 GeV (no radiative tail and no photon emission).

There is also a warning from PHOTOS:

WARNING from PHOTOS: "Momentum not conserved in the vertex". The log file is attached. By switching on PHOTOS, means I don't write "noPhotos" in the decay file. Is this correct?

Thank you for your help.

Alaa

////////////////

The decay file is:

Decay pbarpSystem

1.0 $e+ e-$ PHSP;

Enddecay

End

////////////////
