Hello Stefano,

if i run a GEANT4 or GEANT3 simulation within PANDARoot dec17p2b out of box via using:

```
void my_sim(.....SimEngine= 'TGeant4')
```

or

```
void my_sim(.....SimEngine= 'TGeant3')
```

a new gphysi.dat will always be written.

What changes is only the date/time statement in the header of that file.

The SetCuts.C file looks fine for me:

```
gMC->SetProcess("PAIR",1);
```

This brings me to the conclusion to ignore the gphysi.dat file.
