Dear Mr. Kresan,

I had in my .bashrc first:

```
export PATH=$PATH:$SIMPATH/bin/  
export LD_LIBRARY_PATH=$LD_LIBRARY_PATH:$SIMPATH/lib/:$SIMPATH/lib/root/
```

which I now changed to:

```
export PATH=$SIMPATH/bin/:$PATH  
export LD_LIBRARY_PATH=$SIMPATH/lib/:$SIMPATH/lib/root/:$LD_LIBRARY_PATH
```

It turned out that 'which cmake' points to the first cmake that is found in PATH.
After flipping the order, 'which cmake' pointed to the FairSoft Build:

```
christiaan@christiaan-Z230:~$ which cmake  
/home/christiaan/Desktop/FAIR/FairSoft_Build//bin//cmake  
christiaan@christiaan-Z230:~$ cmake --version  
cmake version 3.11.1  
CMake suite maintained and supported by Kitware (kitware.com/cmake).  
christiaan@christiaan-Z230:~$
```

Afterwards, I had no problems installing the latest dev-branches of FairSoft, FairRoot and R3BRoot.

So thank you very much for your help.

Christiaan.
