Dear all,

Can anyone tell me how I should change the run_sim.C macro if I want to modify the Geant4 physics list?

I also have tried to switch to Geant3. Then, the macro crashes.
(runtime seg-fault error).

I particularly like Geant3 for visualization of the geometries, since with Geant3 the detectors have colors, while they are mostly black, and brown for Geant4. Does anyone know how I can run a simulation under Geant3?

Thanks in advance!
Christiaan Douma.
