

Hi everyone

I am trying to update my FairSoft/FairRoot installation to the latest version. I just made a fresh Ubuntu 18 installation so I was not expecting any conflict. However, FairRoot CMakeLists has some problem trying to find Boost, or as far as I understands, it find the one that comes by default with the system.

I would appreciate some help to solve this as I am somehow blocked to continue developing my framework. Thank you very much in advance!

Here is the full cmake message.
