FairFileSource::AddFile() looks promising. How can I use it?

In a steering macro, I do

```
FairRunAna* run = new FairRunAna();  
run->SetInputFile("<path to>/DigiFile.root");
```

Can I then just do

```
run->AddFile("<path to>/DigiFile_2.root");  
and do run->Run(0, twice as many events as in a single file);
```

Christiaan.
