Dear ML experts of PANDA,

during our joined GlueX-PANDA workshop we discussed how to improve our collaboration especially in the field of ML.

One of the ideas was to have common computing challenges which they are already doing at GlueX.

Their challenge for May is a very simple tracking problem which should be solved with ML. More details you can find at this webpage:

https://halldweb.jlab.org/talks/ML_lunch/May2019/

They highly invite us to participate and win maybe also a price . So please have a look at the webpage and make up your mind if you want to participate.

Cheers,

Tobias
