Hi Héctor,

To point 1) Was probably mistyped. Your correction is valid.

2) Concerning fYAngle being not properly set - also true.

3) Here I will not agree immediately. When calculating the shift of GLAD in cave, I was overlaying the complete picture of the field map on top of glad geometry. In particular the coils are nicely visible when one plots By component for Y=0 plane. Could you please cross-check this?

Best regards,
Dima
