

Subject: Large momenta from BOX generator

Hello,  
I generate single muon events with 5 GeV momentum by the BOX generator. However I get events with very large momenta from detector, so for 100,000 initial muons there are 12 events with  $p > 100$  Gev and several events with  $p > 1000$  events. How is this possible, is something incorrect? PandaRoot Oct19 is used.

Data directly from signal\_pid.root file, 100,000 initial events.

Data made by tut\_ana.C tutorial program. 1,700,000 initial events.
