Hi everybody,

I thought that it makes sense to open up a thread where we post updates on the material status, e.g. what types of padplanes are available etc. Also questions to the status should maybe be posted here, since it gets distributed, some stuff is at Heidelberg, Radiators are at Muenster, and some tooling and material like glue are at GSI.

So to start (for those who do not know yet):

Padplanes:

-L2C0 Padplanes arrived ~mid march, are at Frankfurt for soldering right now.

-L6C1 padplanes arrived at CERN last Friday and are on their way to Hd.

L-Profiles:

-C0 type (for Dubna):

about 6 pieces are ready (which are not built into chambers at Hd), more will come soon.

-L5/6C1: possibly 18 pieces available soon. So I think we would send 4-5 chambers worth to Bukarest, and keep some for Hd.

Front profiles:

-L1: 21 pc.

-L2: 16 pc.

-L6: 18 pc.

So much for now.

cheers,

Clemens
