Dear Geant4 users,

since there is still a lack of disk space I will remove one more of the old G4 installations on /u/gsisim/simulation for gcc295-04.

Does anyone still use the version:

Geant 4.4.0 for the compiler gcc295-04, located at /u/gsisim/simulation, with VMC support ?

The exact location is

/u/gsisim/simulation/geant4.4.0_vmc

In case I will not hear any protest until end of this month, I assume that I can remove this installation.

Cheers,

Kilian
