Subject: panda base classes
Posted by Ralf Kliemt on Fri, 25 May 2007 09:13:08 GMT

Hi everybody,

At the Ferrara workshop we noticed that we will need a base class directory specific for the panda software. As I remember there should be general classes, e.g. track & candidate prototype classes (collection of hit numbers, no representation (?)) and the detector plane. Such things I have seen in the genfit & recotasks and I think these datatypes don't depend on the package but the other way around.
I think it would be good to have such standards, esp. when thinking of the forward part a common detector plane class is needed anyway.

Regards, Ralf.
