Subject: Re: CMake Problem Thread Posted by Florian Uhlig on Thu, 31 May 2007 13:34:31 GMT View Forum Message <> Reply to Message

Hi Stefano

I found the problem. cmake is looking in the GEANT4 directory for a file env.sh which contains all the seetings used for building GEANT4. If you use the tarball from GSI this file should be in that directory. If you have installed GEANT4 on your own than you should look in the following subdirectory for this file .config/bin/Linux-g++. Please copy this file to the GEANT4 directory and the everything should work.

Ciao

Florian
