Hi all,  
I have calculated 10000 Events of  
pbar+Cu reaction at 4.05 GeV/c by Urqmd\_smm model  
and put output root-file "pbarCu\_4\_05.root"  
at GSI cluster lx00X.gsi.de in /d/panda02/urqmd\_smm .  
You can use it.

Stefano wrote

>>>>>>>>>

I would suggest to keep all these informations inside wiki.  
I created a topic there:

<http://panda-wiki.gsi.de/cgi-bin/view/Computing/UrqmdSmm>

where I think it could be useful to write a table with the locations of all the files, with the  
corresponding reaction, energy, and location on the GSI cluster

>>>>>>>>>

I agree with Stefano and I will dispose such table inside wiki.

Best regards, Aida
