Dear all, I just found that skype 3.2 has a business version with conferences up to (so the www page) 25 participants. I downloaded (obviously no charge) and installed. Note: if you select "all" (this means skype and skype internet explorer plugin) then it stops, if you have an internet explorer open at the same time. Anyway, then I checked the conference call tool, and it tells me "maximum 9". So we just have to find out why they are not saying the truth (25 instead of 9) on the skype www page, or maybe one can have 25 participants and I just was not able to find it. more later, -- Soeren
