Hi Mohammad!

And when there are two different releases, I will have to check out two pandaroot directories. Create a build directory for each and do the usual procedure for a build in each of them. Is that right?

This would mean my directory structure could look like this:

```
FAIRRoot/  
.. pandarootDev/  
.. pandarootStable/  
.. buildDev/  
.. buildStable/
```

Is this the idea?

Cheers! Sebastian.
