Hello,  
I found the reason of the "low efficiency"... and it was a bug of mine! I was looping until a `GetEntriesFast()-1` instead of `GetEntriesFast()`, so I was always missing the last cluster.

The following is the updated plot of efficiency theta-dependent:

Now only the space is present, and even we do not have the problem in low momenta region (I will show the plots at the collaboration meeting)

Sorry for the disturb...
