Hi Guys,

I did the SVN Update to revision 1112 today morning and tried my luck with cmake - for the first time. I followed the steps suggested by Ralf Kliemt in his "Using Cmake" Thread.

After running SetEnv.sh and creating the cbuild directory I got the following error during the cmake process:

dallas \$ cd cbuild/

dallas \$ cmake ../pandaroot/

- -- Check for working C compiler: /usr/bin/gcc
- -- Check for working C compiler: /usr/bin/gcc -- works
- -- Check size of void\*
- -- Check size of void\* done
- -- Check for working CXX compiler: /usr/bin/c++
- -- Check for working CXX compiler: /usr/bin/c++ -- works

CMake Error: Error in cmake code at

/home/knucl/FAIRroot/PANDAroot/pandaroot/CMakeLists.txt:21:

INCLUDE Could not find include file: CbmMacros

Current CMake stack:

-- Configuring done

dallas \$

C-Make version is: 2.4.5

I hope anybody can help me with this problem.
