Hi

I think something went wrong with your checkout from SVN.
Did you create a new directory or did you update a existing
directory?

Please go to the main source directory. and try

`svn update`

The last line of the update should be something like

Updated to revision 1114

where 1114 is the revision number and may differ. If the last line differs and you update a
existing local working directory then there is probably a conflict which SVN could not resolve.
In this case svn stops and tells you that there is a conflicting
file and you have to first solve this conflict.

Ciao

Florian
