Hi

I think something went wrong with your checkout from SVN.  
Did you create a new directory or did you update a existing  
directory?

Please go to the main source directory. and try

```
svn update
```

The last line of the update should be something like

```
Updated to revision 1114
```

where 1114 is the revision number and may differ. If the last line differs and you update a  
existing local working directory then there is probably a conflict which SVN could not resolve.  
In this case svn stops and tells you that there is a conflicting  
file and you have to first solve this conflict.

Ciao

Florian
