Hi Alicia!

This file is only needed for special Simulations, where the space charge distortions are taken into account in the TPC. When this option is switched off in the drifterTask the digitization is supposed to run without this file.

However I do not know if Felix has programmed it that way.
Felix, can you have a look at this, please!?

Alicia you can try to switch off the Distort option of the DrifterTask and see if it does work.

Cheers! Sebastian.
