Hi!

The error message I posted has nothing to do with the VMC interface (at least I would be extremely surprised) When you look into the respective G4 class you will notice, that there are simply a lot of divisions where there is no check for division by 0. I guess that is where the problem comes in.

I have done all studies so far with G4, so I do not see why it should be impossible. Furthermore the complete code is in our hands. If the community is not fast enough we have to look ourselves. At least try to.

I guess that there are people in Panda that are adept enough to debug G4!?

Regards, Sebastian.
