Hi

I think i solved the problem by installing geant4 version 8.3.
You can try to use this version at GSI doing the following steps.

```
> export SIMPATH=/misc/cbmsoft/Debian3.1/debug  
> cd <your_build_directory>  
> cmake <your_source_directory>  
> . config.sh
```

Please test this version and tell me if the problems are gone for all of you.

I will go on to create a new version of our external packages which then can be downloaded from the CbmRoot webpage.

Ciao

Florian
