Well here is a list of the data objects I want to store (pandaroot/mvd/MvdData/MvdCluster.cxx):

class MvdCluster : public CbmHit{

[...]

private:
  unsigned int _frontend;
  unsigned int _wafer;
  unsigned int _clusterSize;
  double _totaldE;
  double _meanTime;
  std::string _detPart;
  unsigned int _mcid;

}

The surprising thing is that before the Crash several events are done correctly!

What could be wrong?

ciao, Ralf.
