Hi,
I will check the first one.

For the second one I think the problem is that you are not comparing a pointer, but a number.

Indeed in the expression:

(pTrack->GetParamLast()->GetTx()) != NULL

pTrack is a pointer to a CbmSttTrack,
pTrack->GetParamLast() is a pointer to a CbmTrackParam,
but pTrack->GetParamLast()->GetTx() is a double so a number! Maybe you should remove
GetTx or something else, to clean that condition.

P.S. I removed the headers in tof code
