Hi!

I have locally modified CbmMCTrack which I could not commit. I will remove the changes and fix this in recotask. I have implemented an auxilliary class MCTruthAnnex which can be used to store additional data concerning the MCTracks. I need this to define reconstruction efficiencies. In TrackFitStatTask for each MCTrack one Annex is created. Look there for references. The Annex could be extended to store data from other detectors!

I will inform you when I did the fixes in recotasks

Cheers!

Sebastian.
