Hi Annalysa,
I had actually problem
try to see
what does the ResetParameters() in your ProcessHits do?

This function should put to zero your members functions, i can be that the default value is not zero.

In your CbmDrc.h
there is this initialization
try to put all the values to zero.

```
inline void CbmDrc::ResetParameters() {  
    fTrackID = -999;  
    fCopyNo = -999;  
    fPos.SetXYZT(-999., -999., -999., -999.);  
    fMom.SetXYZT(-999., -999., -999., -999.) ;  
    fTime = -999;  
    fLength = -999;  
    fELoss = -999;  
    fmass = -999;  
    fflag = -999;  
    fEventID = -999;  
}
```
