FYI, a message from Ivana to VMC forum, date: 5 october 2007.

Johan.

Dear colleagues,

Geant4 VMC has been now updated with important changes in the definition of the physics list. The obsolete default physics list has been removed and replaced with use of physics builders defined in Geant4.

No modification is needed in a user own physics list to be included in user VMC application. (The maps of processes to VMC codes are now filled automatically.)

More detailed description can be found at:
<http://root.cern.ch/root/vmc/Geant4VMC.html>
and new usage is also demonstrated on the examples.

The updated version is now distributed via Root SVN (Sunversion) server. Please, have a look at <http://root.cern.ch/root/vmc/VirtualMC.html> how to download the code and at <http://root.cern.ch/twiki/bin/view/ROOT/SubversionHowto> for more info about Subversion

Let me know in case of any problem.

Best regards,

Ivana
