Hi Mohammad,

yes, exactly, I want to use root files for the geometry (like in the MVD or dch) and I followed the way of dch detector, where I added to sensitives crystals by their names.
I also tried to use the CheckIfSensitive() methods (like it is done for mvd), but somewhere I still miss something, because I have exactly the same effect that detector is plotted (so I guess that in some part crystals are added to sensitives), but still I can't see ProcessHits() function running.

Regards,
Ola.
