Hallo,

The overlap problem and the dtor of TGeoManager are not really related to the vmc 2.4. Also the result which you get using vmc 2.3 with the default physics lists are completly wrong as you have seen in the emc! So I think it would be better to get rid of the vmc 2.3 as soon as possible, Because even if the Geant4 part is not stable we still have the G3 and we can work further with it.

>>(hoping that vmc 2,4 will be tested by somebody else)

In fact I think no body else but us is using this part now (G4_vmc), I have found bugs in the VMC which insure this, and Ivana has corrected this already in SVN.

My humble opinion.

Mohammad
