Hello Alicia,

I can help you with the error in the geane tutorial directories.

The tutorial directory, in our case, is meant to collect the tutorial files that have to be copied to the pandaroot top directory to be compiled and run: this has to be done for GeaneEx and for plane, which are new packages.

The directory geometry contains files that must be copied in your pandaroot-geometry directory, while the directory macro can be copied anywhere, I suggest you pandaroot/macro/geane. If you do this, things should compile and run.

Let me know...

Ciao,
Andrea
