I would support Ralf's proposal.

I think it is even not required anymore to add the roofit tar file as it seems already part of root since 5.02.

I used it once for 2-dim fits and usage is quite simple.

```
root> gSystem->Load("libRooFit") ;  
root> using namespace RooFit ;
```

and see an example macro for an x-y gauss fit

<http://roofit.sourceforge.net/docs/classref/examples/intro3.cc.html>
