---

Meeting at 10:00, in room 4.140

Preliminary agenda:  
(priorities to be assigned, for the moment only a simple list)

- 1) shifts to write protocols of the meetings
  - 2) status new XRD cluster (Kilian, Victor)
  - 3) AliXRDPROOFtoolkit (Marian)
  - 4) Next PROOF tutorial
  - 5) GRID users' jobs at GSI:
    - Ana's analysis task: compilation problems (Kilian)
    - Silvia's experience during last week
    - Anna's monitoring
  - 6) status file transfers (Kilian)
  - 7) first speed test results (Misha)
  - 8) copy of the AliEn database to GSI
  - 9) installation of AliRoot v4-07-Rev-01
- 
- 

Additional information:

Point 5: GRID users' jobs at GSI

---

Silvia

---

Point 8: Database on AliEn

---

(information from Alberto Colla)

For AliRoot v4-07-Release and its revisions, use:  
[/alice/simulation/2007/PDC07\\_v4-07-Rev-01/](/alice/simulation/2007/PDC07_v4-07-Rev-01/) (full geometry)  
and  
[/alice/simulation/2007/PDC07\\_v4-07-Rev-01\\_PartialGeom/](/alice/simulation/2007/PDC07_v4-07-Rev-01_PartialGeom/) (partial TRD and TOF)

---

You can drain a local copy of the database with AliRoot (with access to AliEn):

```
AliCDBManager* man = AliCDBManager::Instance();
man->SetDefaultStorage("alien://folder=/alice/simulation/2007/PDC07_v4-07-Rev-01/Ideal/CDB/");
man->SetRun(0);

man->SetDrain("local:///d/alice08/sma/soft64/CDB2/PDC07_v4-07-Rev-01/Ideal/CDB");
AliCDBStorage* sto = man->GetDefaultStorage();
sto->GetAll("*",0);
```

---

Now it is also possible to access the DB on AliEn only once at the beginning of the task, cache a local temporary copy and use that for any further access during that session:

```
man->SetDefaultStorage(
"alien://folder=/alice/simulation/2007/PDC07_v4-07-Rev-01/Ideal/CDB/?cacheFold=/tmp/DBCache")
```

---
