There was an inconsistency in the simulation macro used for the MC production, which E. Litvinenko discovered. The magnetic field map FieldMuonMagnet was used, but for the magnet geometry, magnet_active.geo was loaded.

The bug was fixed; now magnet_muon.geo is used in run_sim.C. The production of all data sets was redone. If you already used the data before October 27 for analysis, it would be better to rerun.
