## Subject: Bug fix
Posted by Volker Friese on Fri, 02 Nov 2007 14:58:33 GMT

There was an inconsistency in the simulation macro used for the MC production, which E. Litvinenko discovered. The magnetic field map FieldMuonMagnet was used, but for the magnet geometry, magnet_active.geo was loaded.

The bug was fixed; now magnet_muon.geo is used in run_sim.C. The production of all data sets was redone. If you already used the data before October 27 for analysis, it would be better to rerun.
