Hello,
the class names of the passive directory were changed according to the PndXXX convention.
I changed the macros in run and emc to deal with the new names, but for the rest of the
detectors you should update your code, just substituting Cbm with Pnd for the Cave and the
Pipe volumes.

Meanwhile even the drc (thanks to Annalisa) and the muo directories have the new name
convention. For the emc Dima has changed the names several months ago so it is ok, as well
as dch tof and pgenerators.

In field there are still some classes that should be changed. I did it in my private code, but I
found that all the field maps in pandaroot/input are saved as CbmFieldMapData, so one should
convert those files before applying the modifications in the repository.

Bye
