Hi Mohammad!

No, this is the problem! For some reason in the output file, there are two branches both named 'PndCandidates' which contain exactly the same.

But I found something in the console output, which might be of interest, namely the messages:

Warning in <TTree::Branch>: Using split mode on a class: TParticle with a custom Streamer

Warning in <TTree::Branch>: Using split mode on a class: TParticle with a custom Streamer

Probably it's somehow related to the problem, but I don't know how ...

Thanks,
Klaus
