Hi!

I have a question concerning the stepsize limitation and the effects on De/dx. I have plotted the MC-Energyloss over Length

(Pion+, Mometum=0.5 Gev/c, 100 Events)

with Options

"specialCuts+specialControls" in G4Config.C, it looks fine to me, like a landau, as expected:

I have plotted the stepsizes, too:

And now my problem: i need stepsize limitation, i turned it on with Option:

"specialCuts+specialControls+stepLimiter" (everything else unchanged)

there is stepsize limitation, like i have befor with the old Release, but my de/dx-MC data is broken:

(stepsize limitation works:)

What do i have to do to fix this?

Thanks in advance!

Viola
