Hi all!

I prepared a WIKI page which contains all the necessary information for that Fast Simulation and Analysis tutorial on monday afternoon, which can be found here:

<http://panda-wiki.gsi.de/cgi-bin/view/Computing/FastSimTutKVI>

You can find there the things we'd like to learn (some task we'll do together), some help items and hints/solutions for the tasks.

Just be aware (I'm also going to mention that in the tutorial) that you can look up necessary information independent of my current slide in the presentation to work on the tasks.

There's also a 'What needs to be prepared' section, which might already be of interest (it's basically what Soeren posted in this thread first...)

Have a nice weekend and see you in Groningen,
Klaus
