Short Addendum:

Mohammad said on Friday on the phone that he also found a (temporary) solution for the newer distributions which come with gfortran instead of g77 (e.g. suse 10.3 - i.e. for all the people like me who thought that it is a great idea to use christmas to install a new version on all your computers ...). In other words: you should (a) _not_ try to go back to an older platform or (b) _not_ try to go back from gfortran to g77.
