Hi!

I have protected the RiemannTrackingTask against missing MVD hits. So we can start porting and generalizing.

We should start with the PndTpcRiemannHits and PndTpcRiemannTracks. Can you have a look and give me some feedback on these classes. Do you understand what's going on?

Tobias, can you copy them to the PndTools and start renaming?

There is a tpcrcp/test directory with a testing class. We should have something like this also for the general version!

cheers! Sebastian.
