Hi!

In their first publication the authors use the rieman sphere. They later switch to the paraboloid because then the trafo becomes simpler and also the error claculation is a bit simplified.

Maybe it is a good idea to follow this! And when we are modifying things in that direction we should also include the errors. Maybe this is a good starting point. Lets go to the paraboloid form and add the errors.

Can we somehow subdivide the work?

Sebastian.
