Hi Pablo,

as Ralf noticed, maybe this expresion $xc = xc - s$; is not really important and gives an error, so I commented 2 lines where $xc = xc - s$; was in the `pandaroot/stt/PndSttHelixTrackFitter.cxx` and the `runRECO2.C` macro finally works and finished succesfully .

Could you look at it if it is correct?

Thanks,
Ola.

ps. now, time for next macros
