Hi Ola and Stefano,
  nice to hear that it works now, but Stefano is right: there is still something to be fixed.

I can try to reproduce the error if you tell me exactly what to simulate (maybe you can post your runMC2 macro) and if you could tell me also the seed you used... I' m afraid however that using a different machine will prevent me to reproduce exactly the same simulated events, even using the same seed in input, but we can try!

Nice week end also to you all,
                    Lia.
