Dear all,

I installed several new packages related with the pandaroot simulation framework on the GRID with packman. Here is a list:

pbarprod@cbmssoft::r160108 - external packages 16/01/08 (developer version)

pbarprod@cernlib::r2005 - CERNLIB 2005 (sources and compilation scripts!)

pbarprod@dpmgen::rev2162 - DPM eventgenerator
(deps: pandaroot::rev2162)

pbarprod@evtgen::rev2162 - EvtGen eventgenerator
(deps: cernlib::r2005, pandaroot::rev2162)

pbarprod@pandaroot::rev2162 - PandaROOT rev. 2162 with small updates
to make compatible with cbmssoft::r160108
(deps: cbmssoft::r160108)

On the KVI machines, I have tested successfully the compilation and building of the packages and some sample script macros (sim_emc.C and fastsim_jgm.C). Could anyone also try it on their site?

Kind wishes,

Johan.
