Dear all,

I have added the possibility to use a "test" geometry for EMC.

This is called "EmcTest", corresponds to module==6, and it is a structure of 5x5 crystals without any reflection/rotation.

The geometry file is emc_module_5x5.dat, given me by Chris but where module number becomes 6, and to run it I have provided a macro/emc/sim_emc_test.C macro (gamma at 1 GeV emitted at $\theta=0^\circ$).

Have fun (and tell me if it does not work...)
