Hi, has anyone ever seen the following error when compiling
the new external packages? (when compiling proof)

[...]
cp proofd/inc/proofdp.h include/proofdp.h
gcc -g -pipe -m32 -Wall -W -fPIC -Iinclude -pthread -DINCLUDEDIR=\"/usr/include\"
-DOBJSUFFIX=\".o\" -o build/rmkdepend/cppsetup.o -c build/rmkdepend/cppsetup.c
make: expand.c:489: allocated_variable_append: Assertion `current_variable_set_list->next !=
0' failed.
./configure_full.sh: line 657: 30423 Aborted   make -j$number_of_processes

platform is
gcc 3.2.3
Red Hat Linux 9.0

thanks in advance, Soeren
