Oh excuse me,
yes the start detector
is already in the simulation. It is inside the tof directory, actually scintfibers and tob barrel have
been implemented
together in the same geo file.

you can plot hyp and tof together and
you will have a look into this setup. Unfortunately
in the figure i have sent to you, the fibers are not very well visible. you only see the blue circle
around the secondary target.
Ok i hope that can help.

cheers alicia.
