Oh excuse me,

yes the start detector

is already in the simulation. It is inside the tof directory, actually scintfibers and tob barrel have been implemented

together in the same geo file.

you can plot hyp and tof together and

you will have a look into this setup. Unfortunately

in the figure i have sent to you, the fibers are not very well visible. you only see the blue circle around the secondary target.

Ok i hope that can help.

cheers alicia.
