Meeting at 12:30 in room "c26 unten" (1.014)
NOTE THE DIFFERENT ROOM !!!

Preliminary agenda:

1. Updated plans for PROOF after March 10

2. Update on software installation at GSI and related scripts
- AliEn (scripts still give 2-13)
 - ROOT v5-18-00 and v5-18-00a (at least on 64 bit machines)
 - geant3 v1-9
 - Aliroot v4-10-Release + v4-11-Release

We would like to know about the scripts and the alien version. It would be ideal to have up to aliroot centrally installed, but in the meanwhile, having at least a common ROOT (with right alien and xrootd) seems of high priority.

3. in the LSF report there used to be very useful information like "Max Memory" and "Max Swap" used by the job. The information is not available with the alice batch machines (queue alice-t3). Can we do something about it?

4. talks at DPG

5. problem of /tmp/ full on batch machines

6. data to lustre
